

TRIACT Foam With Silicone Border.

The peri-wound deserves silicone.
The wound deserves better.

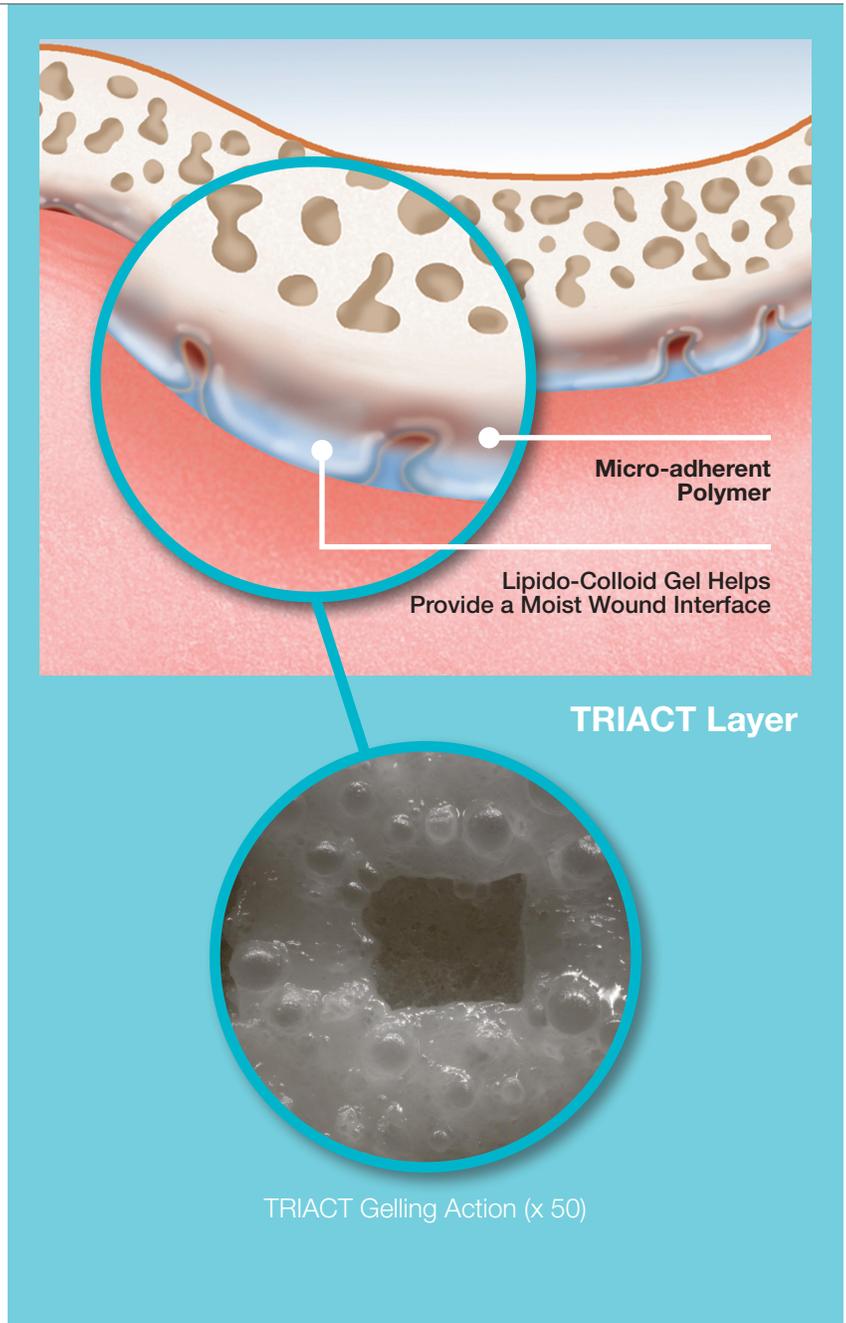

- TRIACT Technology helps create a moist, wound-healing interface
 - TRIACT Technology helps prevent damage to newly formed tissue during dressing removal
 - Silicone border offers virtually pain-free removal

The TRIACT Difference

Lipido-colloid matrix contains CMC particles that form a gel in the presence of exudate, which:

- Helps provide a moist, wound-healing environment
- Helps provide a non-adherent wound interface
- Helps prevent damage to newly formed tissue during dressing removal

After 72 h, no gelling action is observed in Allevyn Gentle Border or Mepilex Border.¹

Allevyn Gentle Border 2-D Observation (x 50)

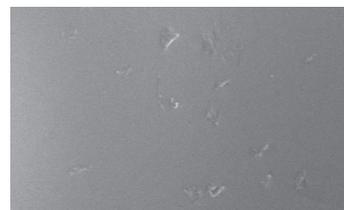

Silicone after contact with fluids for 72 h

Silicone Layer Magnified

Mepilex Border 2-D Observation (x 50)

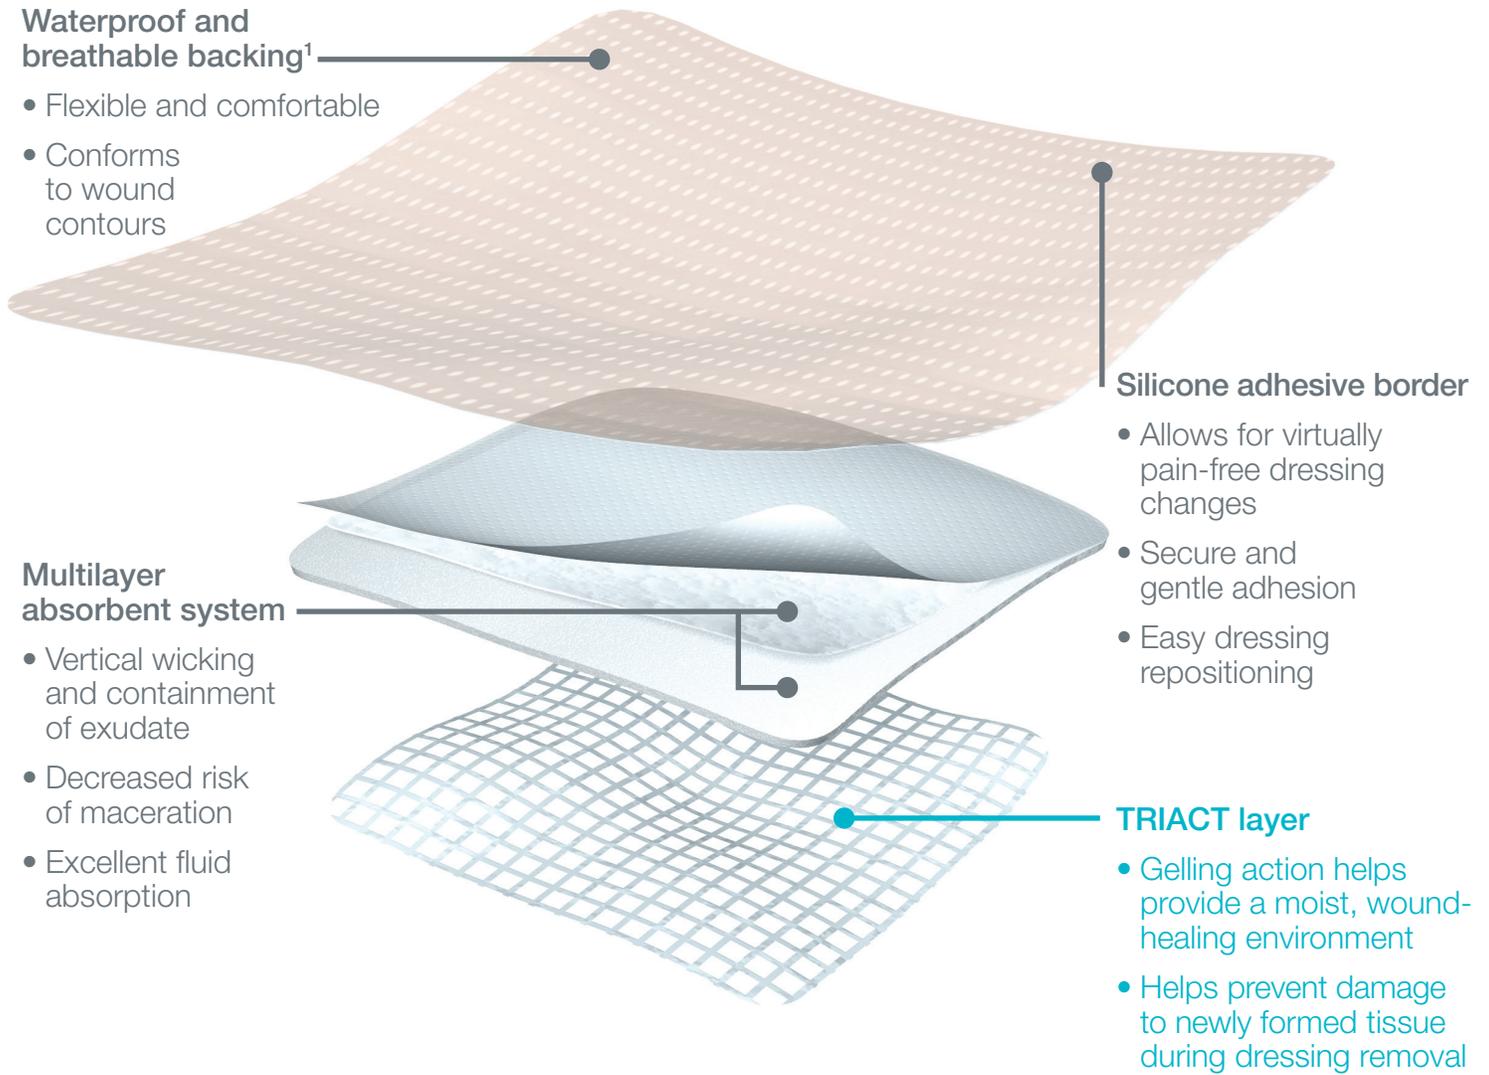

Silicone after contact with fluids for 72 h

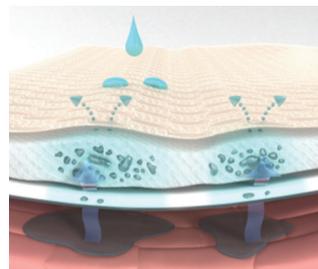

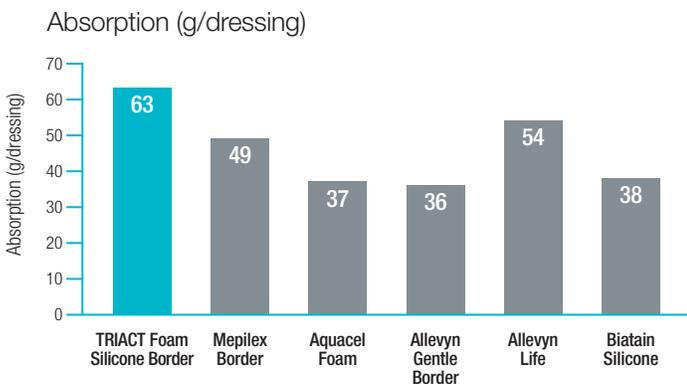

Silicone Layer Magnified

Silicone adhesive protects the peri-wound.

TRIACT layer provides a moist wound environment.

TRIACT foam with silicone border demonstrates a high absorption capacity.¹

Dressings featuring TRIACT Technology
